High Alumina Plate vs Conventional Plate

Falling and sledge test in Video:

Germany's Holst Porzellan is a leading star of German porcelain industry, has been persistent and committed for many years, using the world's top German porcelain technology to break the deadlock in the porcelain tableware industry throughout the hotel, restaurant, catering (HoReCa) industry and succeed in Germany and throughout Europe. Sincerity hopes to share achievements with Asian peers and seek common profits and extra business. We are writing to you (the industry leader), and we hope to have the opportunity to meet and seek cooperation on our high alumina porcelain.

Porcelain tableware deadlock

Conventional porcelain tableware in the HoReCa industry is commonly easy to break and chip. It will rupture when the temperature difference is large. The glazed surface has insufficient anti-wear strength, and it is heavy and difficult to transfer. These inconveniences have not been solved in the past hundreds of years, which has hindered the wider use of porcelain tableware in the HoReCa industry. And has made porcelain increasingly unsuitable for today's ever-changing kitchen equipment.

Break the deadlock

At present, the supply of porcelain tableware in the professional HoReCa industry is stagnation in the sluggishness of oversupply and unsuitability. Germany's Holst Porzellan, a leading star in the German porcelain industry, has been persistently committed to investing for many years, using the world's top German porcelain technology to break the deadlock. The effective introduction and addition of alumina in porcelain blocks composed of kaolin, feldspar and quartz gives great physical strength, higher flexural strength and finer quality. The Holst High Alumina Porcelain tableware is no longer easy to break, under big range of temperature difference is not broken, the surface wear resistance becomes extremely high, and it is much thinner, lighter, finer and elegant. As a result, German Holst Porzellan enjoyed a drastic sales growth in the German-speaking countries and neighboring countries, and the users praised us. The following three hard facts represent the essential difference to conventional quality porcelain and thus guarantee our distributors a much better business.

	FD 213 Square bowl 13 x 13 cm "Fine Dining" L 13,0 x B 13,0 x Q 15,0 x H 3,8 cm	PU 48/6		FD 332 Rectangular plate 31 x 24 cm "Fine Dining" (**) L 31,0 x B 24,5 x H 2,2 cm	PU 12/4

With 30 x 27 cm, the middle oval plate is the most common size of porcelain plates in oval form. The plate "Ovali" is a classic among the specialty plates and does not reveal its features at first glance. Let us explain the peculiarities of this plate, because design and function form an almost gastronomic symbiosis. Basically, the dishes and main courses on the oval plate are arranged lengthwise. This makes the plate especially suitable with many fish dishes, skewers, meat and steak dishes as well as eggplant and zucchini vegetables. It's the ideal size for serving up to a pound of asparagus with side dishes. The discreetly harmonious oval highlights the perception of the eye and gives the presented food a special touch.
